OBJECTIVE

Computer Science student with hands-on experience developing web and mobile applications, seeking a Software Tester Internship. My development background enables me to analyze source code, reproduce defects efficiently, and collaborate effectively with developers during debugging and validation processes. Through academic and personal projects, I have designed test scenarios, executed functional and API testing, identified software defects, and verified system behavior across different application layers. I aim to build a strong foundation in software quality assurance, testing methodologies, and product validation while contributing to the delivery of reliable software products.

SKILLS

Testing

- SDLC & STLC Fundamentals
- Test Case Design & Execution
- Functional Testing
- API Testing (Postman)
- Regression Testing
- Mobile Application Testing
- Defect Reporting & Tracking

Tools

- Git
- GitHub
- Android Studio
- Visual Studio Code
- Postman

Database

- SQL
- SQLite
- MongoDB

Programming Knowledge

- Python
- Java
- Kotlin
- JavaScript
- SQL

Languages

- English (B2)
- Japanese (JLPT N4, currently studying N3)

EDUCATION

Vietnam Japan University – Vietnam National University, Hanoi

2022 - 2026

- Bachelor of Science in Computer Science

CERTIFICATIONS

FutureLearn

- Computer Networking Fundamentals (2023)

AI Chatbot Management System for Facebook Messenger

FastAPI · Android (Kotlin) · SQLite · Ollama (Phi-3) · Facebook Messenger API

Personal full-stack project (Graduation Thesis) — self-initiated QA testing performed after development.

- Designed and executed test cases for 9 REST API endpoints using Postman, covering authentication, bot CRUD, conversation history, statistics, and Facebook webhook verification.
- Performed integration testing across the FastAPI backend, Android mobile app, and Facebook Messenger webhook to verify end-to-end message delivery flow.
- Verified three authentication mechanisms: HMAC-SHA256 webhook signature (valid / tampered / missing), Bearer token API authorization (valid / expired / unauthorized), and AES-256 encrypted token storage on Android.
- Conducted Android UI testing across login, bot management, chat history, and analytics screens, documenting UI inconsistencies and failure behaviors on invalid input.
- Identified and reported two system defects: synchronous webhook processing causing response timeouts under load, and a static shared token unsuitable for multi-user access.

Library Management System (DEHA.Web)

React · Node.js · Express · MongoDB · REST API

Personal full-stack project — self-initiated QA testing performed after development.

- Executed test cases for CRUD API endpoints (books, categories, transactions), verifying HTTP status codes, response payloads, and correct MongoDB document writes.
- Verified user authentication flows including registration, login, protected route access, and session handling for authorized vs. unauthorized requests.
- Performed boundary testing on file upload functionality (book cover images): valid formats, unsupported formats, oversized files, and empty submissions.
- Conducted functional UI testing on the React frontend, checking form validation feedback, error state rendering, and data consistency after create/update/delete operations.

Eggster AI — Mobile Chatbot Application

React 19 · TypeScript · Vite · Google Gemini API (gemini-2.5-flash)

Personal mobile-first project — self-initiated QA testing performed after development.

- Tested streaming response rendering, verifying that partial output chunks display progressively and the final assembled response is complete and coherent.
- Validated multimodal input handling across text-only, image-only, and combined text+image scenarios with varying file types and sizes.
- Identified and reported a security defect: the Gemini API key was bundled into the client-side JavaScript build and exposed via browser DevTools; recommended a server-side proxy as mitigation.
- Tested mobile UI behavior including viewport responsiveness, textarea auto-resize, and auto-scroll on streaming updates.
